Understanding the Business

Cafe Myriade

Discovery Areas

Operations

- Inventory
- Purchasing
- Sales
- Fulfillment

Business Performance

- Profitability
- Marketing
- Growth
- People & Performance

Understanding how the business operates, where information is used and how decisions are made

Key Observations

- Fragmented Information

Information is spread across different parts of the business, limiting visibility

- Limited Quantification

Business decisions can heavily rely on experience and judgement where measurable data is limited.

- Disorganized Tracking

Existing records may not be structured to easily connect information, identify trends, or support timely decisions.

These challenges can make it difficult to develop a connected, data-informed view of the business.

Defining the Opportunity

Focus: Inventory Replenishment

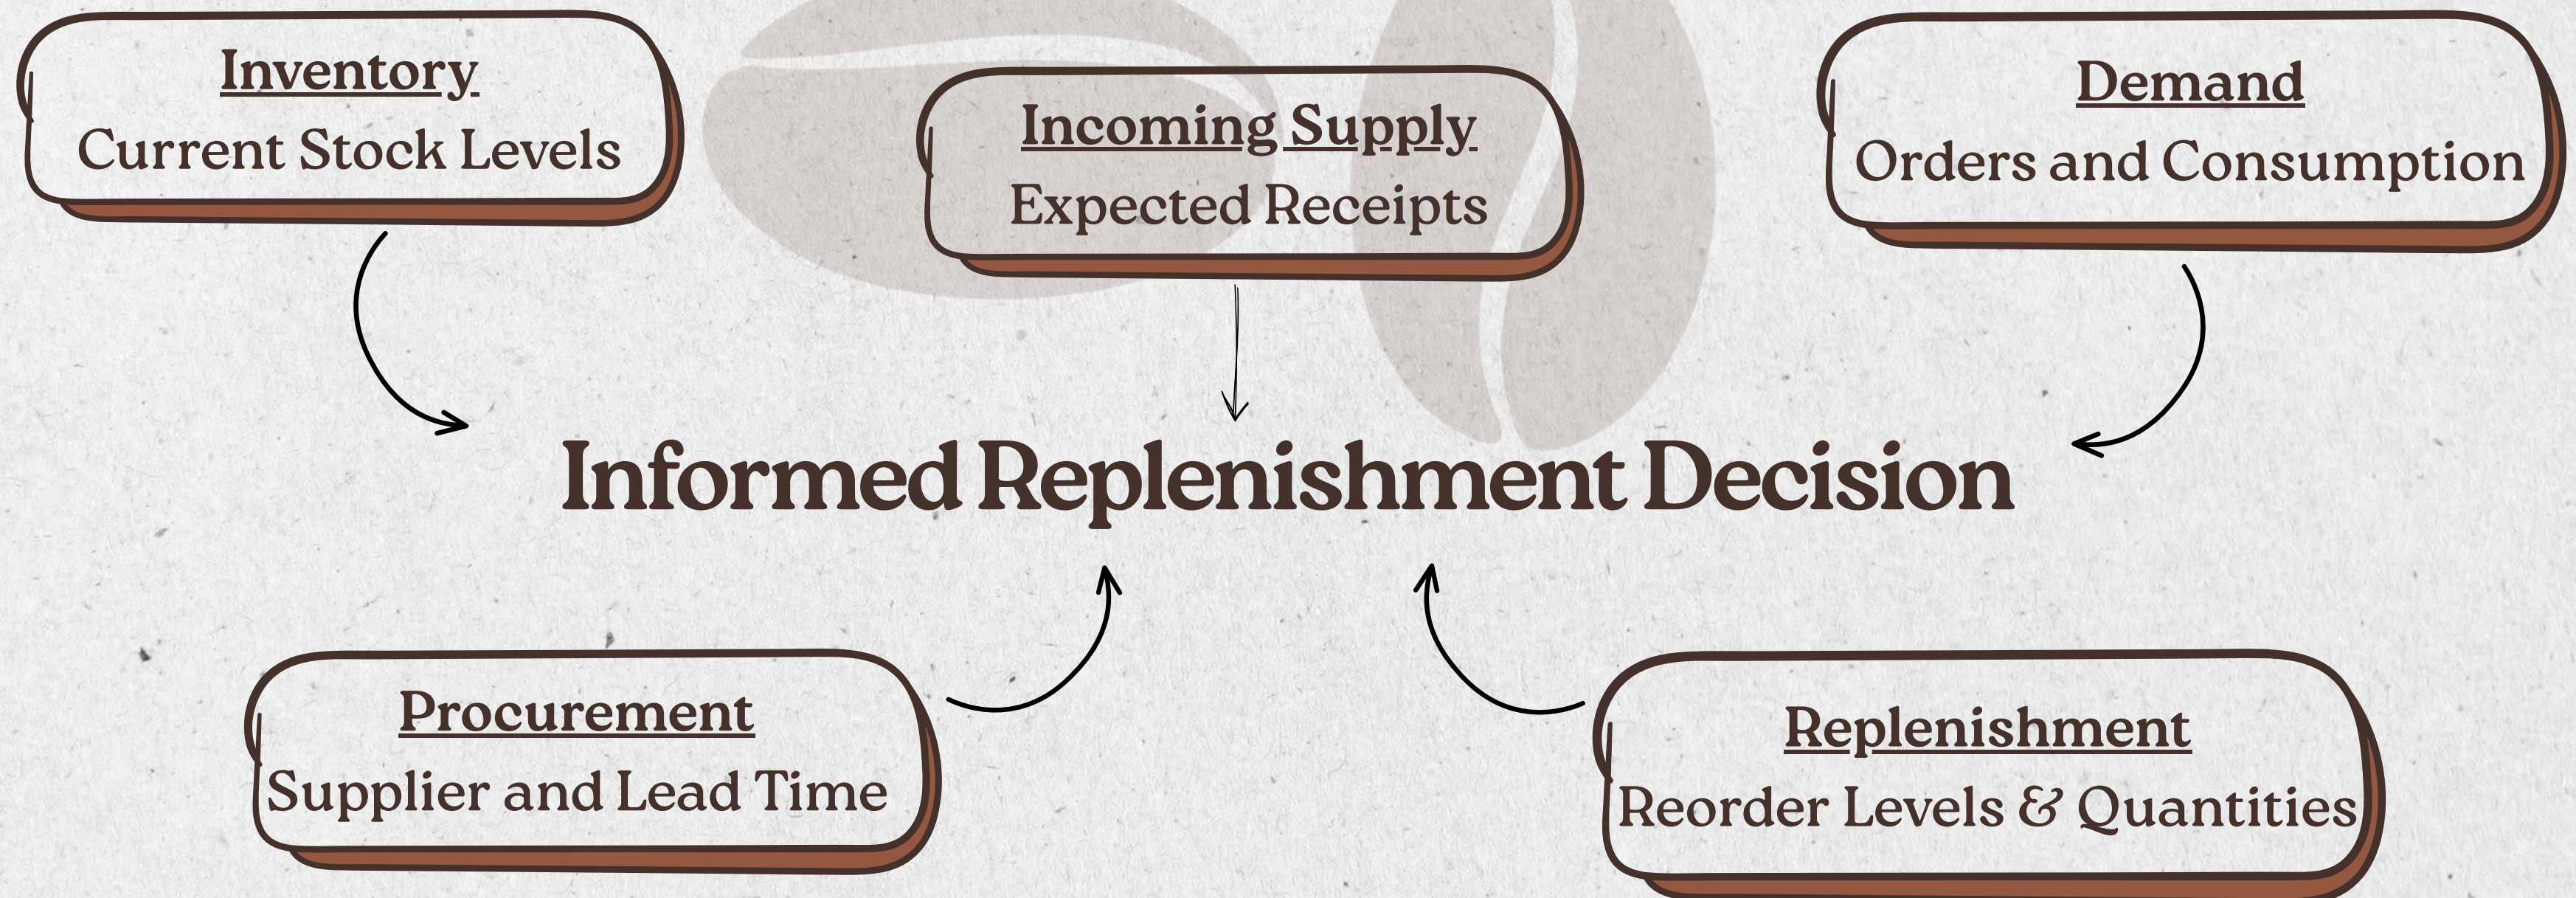

“When should we replenish, and how much should we order? “

To answer this, we need visibility into:

- Current Stock
- Demand
- Incoming Orders
- Supplier Lead Time
- Storage Constraints

Defining the Requirements

An ideal solution provides the information and controls needed to make timely, informed replenishment decisions

The Ideal Process

Monitor → ***Assess*** → ***Decide*** → ***Purchase*** → ***Receive*** → ***Update***

Review current &
incoming stock
levels

Evaluate demand &
operational needs

Establish timing &
required quantity

Select supplier &
place purchase order

Confirm quantity,
quality, and delivery

Record receipt &
update inventory

ERPNext Capability Mapping

Mapping ERPNext functionality to the ideal replenishment process

Monitor → **Assess** → **Decide** → **Purchase** → **Receive** → **Update**

- Stock Balance
- Stock Ledger
- Stock Projected Quantity

- Sales Order
- Stock Aging

- Re-order Level
- Re-order Qty
- Automatically generate Material Requests

- Material Request
- Request for Quotation
- Supplier Quotation
- Purchase Order

- Purchase Receipt
- Quality Inspection
- Putaway Rule

- Stock Ledger
- Stock Balance
- Stock Reconciliation

Recommendation

Takeaway: ERPNext demonstrates a strong fit for our core inventory replenishment workflow.

Strong Fit

- Inventory visibility
- Replenishment controls
- Procurement workflow
- Receiving & stock updates

Requires Further Validation

- Demand forecasting
- Supplier lead-time optimization
- Storage & spoilage constraints

Next Steps: Validate the identified gaps and configuration requirements before implementation.
